

I think BPL is a bad idea. The fact that it goes over power lines is a bad idea. BPL uses frequencies really low down in nearly the 1 mhz. area and around, which those frequencies mess with our HF Ham Frequencies. But some people think BPL is a good idea. Some people say that BPL is good since high-speed internet is not available in some areas, power companies can supply High-Speed Internet to those who normally was unavailable. But, those people who think that are most likely wrong. They are most likely not Amateur Radio operators. Please consider the idea and don't ruin our hobby!
